

Electronic Evidence Collection/Digital Forensics

This one day course is intended for law enforcement first-responders who have no previous digital forensics training, but who have basic computer skills. Students are encouraged to bring a laptop on which they have administrative rights to install applications.

Students will receive guidance for securing and seizing electronic evidence including computers, removable storage devices, and cell phones. Topics covered will include identification, on-site triage, and securing electronic evidence.

Due to the licensing restrictions of some of the software tools demonstrated, this class is limited to law enforcement officers only.
